MOVEit® MFT Complete
Single Solution to Securely Manage File Transfers

Manage, view, secure, and control file transfer activity with MOVEit MFT Complete. By combining the benefits of secure, reliable managed file transfer, with best-in-class automation software, and automated reporting and monitoring, you can be assured of compliance with SLAs, governance and regulatory mandates.

🔒 SECURITY

Secure Sensitive Data Files
Secure your critical data in transit and at rest with advanced security features and proven encryption (FIPS 140-2 validated AES-256 cryptography). Enforce user, system, and file security policies while controlling the movement of sensitive files. Leverage user authorization / authentication, and delivery confirmation, non-repudiation, and hardened platform configurations.

Reduce the Risk of Data Loss
Secure, easy to use automated workflows minimize the risk of data loss or non-compliant manual transfers. MOVEit Complete provides standards-based integration to DLP (Digital Loss Prevention) and antivirus systems, SAML 2.0 (Security Markup Language) integration to identity systems, and native integration to AD and LDAP directory services.

✓ COMPLIANCE

Assure Regulatory Compliance
Because transfers are logged in a tamper-evident database, MOVEit Complete complies with ISO 27001, HIPAA, PCI, GDPR, SOX, BASEL I/II/III, FIPS, FISMA, GLBA, FFEIC, ITAR, and data privacy laws. It provides pre-defined and customizable reports and logging of all data interactions plus email alerting.

Simplify the audit process
Instantly validate all MOVEit activity with a single consolidated view. Create custom reports or use over 50 out-of-the-box templates. Drag-and-drop elements organize the presentation of key metrics to prove compliance with SLA, regulatory and corporate policies. Customize reports, establish distribution lists with fine-grained access control and schedule auto-generated reports for delivery. Email alerts are sent to authorized users as reports are generated.

⚙ CONTROL

Monitor file transfer activity and track performance
Track the movement and status of every file - all of the time. Gain detailed visibility to all data interactions, including files, events, people, policies, and processes. Monitor performance indicators such as failed transfers by end-point, peak load performance, and total throughput trends.

Simplify Workflow Creation
Any authorized user can easily automate multi-step logic-based workflows and implement business process rules without requiring any programming skills. MOVEit Complete automatically "pulls, processes, and pushes" files to any platform, over any network architecture. Most automation projects can be implemented in hours – not weeks – and without costly professional services or scripts. MOVEit Complete comes with pre-built tasks, yet can be extended with custom scripting or existing powershell scripts.

Application Integration
Our API enables easy integration of MOVEit Complete with 3rd party applications and scripts. API functions are available as Java or COM components and accessible via Java or Windows command line clients. Most MOVEit Complete services and capabilities are also accessible via APIs.

ipswitch › MOVEit

MOVEit Complete Features

FILE TRANSFER PROTOCOLS
› FTP
› FTPS (SSL/TLS)
› SFTP (SSH)
› HTTP/S
› SMTP / POP 3
› CIFS / SMB
› EDIINT AS1, AS2, AS3

SECURITY & RELIABILITY
› FIPS 140-2 validated cryptography
› Cryptographic tamper-evident logging
› Encrypted administrative access
› Automated failover, recovery (requires Ipswitch Failover)

TRANSFER
› AES 256-bit encryption of files in transit and at rest
› Automated policy governance rules
› Single sign-on

AUTOMATION
› OpenPGP File Encryption
› File integrity checking
› Guaranteed delivery
› Anti-virus integration (McAfee, Symantec, Trend Micro)
› User access controls (view only, run tasks, configure tasks)

INTEGRATIONS
› API for custom programming

TRANSFER
› McAfee, Symantec, Sophos anti-virus
› RSA, Symantec, McAfee DLP
› Microsoft ADFS, Shibboleth, Onelogin IdP
› Active Directory, LDAP, secure LDAP, Radius, ODBC authentication

ADMINISTRATION, PRODUCTIVITY
› Supports SQL Server & MySQL (included)
› Delegation of permissions (Host/Tasks, Groups/Users)
› Encrypted administrative access

TRANSFER
› Pre-defined and customizable reports
› Unlimited simultaneous remote / local users
› User, group, folder, file and user aging policy support

AUTOMATION
› Supports complex workflows, advanced tasks, granular rules & custom scripting
› Thousands of tasks and simultaneous task runs
› Scheduled, event-based, on-demand processing
› Synchronize files and folders across systems

MOVEit COMPLETE EDITIONS	Standard	Professional	Premium
Automate file transfers with standards-based servers	✔	✔	✔
Secure transfer (FTP, SFTP, FTPS, HTTP/S protocols)	✔	✔	✔
Application Programming Interface (API)	✔	✔	✔
WS_FTP Professional Clients	10	15	20
Access from Mobile		✔	✔
Ipswitch Gateway (data storage in trusted network)		✔	✔
Ipswitch Analytics		✔	✔
Unlimited PGP encryption keys		✔	✔
AS1/AS2/AS3 protocol support			✔
Outlook and web browser client			✔
